

WATERBRICK® Containers: Multiple Uses, Multiple Solutions

Camping

One of many uses....

WaterBricks are great for camping and due to their portability and durability. In addition, their air tight sealing lid and HDPE plastic construction conceals food odors thus minimizing animal intrusions.

Features:

- Average container wall thickness is approximately 1/8 of an inch (0.125)
- Notched Lid with Full Gasket: Allows a person to easily open the lid while the heavy duty full gasket provides an air tight seal
- Wide Lid Opening: An average adult can easily reach in for stored contents
- HDPE Plastic Resin: FDA approved and BPA free food grade containers

“Great water storage containers.”

Review by Sid - 12/6/10

"These things are awesome, I rarely review products I buy but figured I had to for this one. These bricks are TOUGH and very convenient to tote around. I plan to use them for camping and tailgating and when not in use I will fill them up and stack them in my garage for my water storage. I am going to buy the larger configuration now that I have tried these out."
