

**Multiple Uses, Multiple Solutions** 

"A very useful, versatile product."

Review by Askbart - 6/12/11

"Not only is this a great product for water, but also for any bulk item; food and other life essential items. It is water tight as well as airtight. They can hold over 100 pounds of any item that will fit. Their wide opening makes filling and emptying quite convenient... They are so sturdy; they even make buildings out of them, hence the name, "WaterBrick".

## **Snow Emergencies**

## One of many uses....

When snow covers the ground, having an emergency supply of salt, sand or water in your car can save your life. Here are some ideas about how to use WaterBricks during snow emergencies:

- Car Stuck in the Snow? Fill
  WaterBricks with salt, sand, pea gravel
  or cat litter and keep them in the trunk of
  your car when it's snowing in case you
  get stuck and extra traction is needed.
  After winter ends, clean them out with
  some soap and use them for all your
  other outdoor activities the rest of the
  year.
- Driving a rear wheel car in the snow & Need Extra Traction? Fill a WaterBrick with dirt and secure in the trunk. According to "Road and Travel" magazine, adding weight inside the trunk of a rear wheel drive vehicle increases traction in snow and ice. The back tires in a rear wheel drive automobile gain extra traction from extra force pressing them down onto the road. This extra force increases the friction between the rear tires and the road. Extra tire friction can prevent spinning on snow.
- Trapped in Your Car Due to Snow and Need Water? If the WaterBricks are filled with water, they can be used as a water supply during an unexpected emergency situation along with other trunk essentials for winter preparedness.
